BIG DOG
TECHNOLOGY SOLUTIONS

When your facility needs technology work completed quickly and correctly, delays aren't an option.

Big Dog Technology Solutions delivers responsive, dependable installation of structured wiring, network infrastructure, security, and access control systems for commercial and industrial facilities across the Southeast.

CAPABILITIES

ACCESS CONTROL & SECURITY SYSTEMS
Are you concerned about unauthorized access, limited visibility, or unreliable security systems? We put control back in your hands with dependable access control and integrated security systems designed to protect your people, your assets, and your operations.

TECHNOLOGY HARDWARE PROCUREMENT & LIFECYCLE MANAGEMENT
Outdated or mismatched hardware can create performance issues. We eliminate sourcing delays, compatibility issues, and lifecycle surprises by handling hardware selection and deployment for you.

CENTRALIZED NETWORK MANAGEMENT & CONSOLIDATED BILLING
If managing multiple networks, vendors, and invoices has become time-consuming and hard to track, we help bring everything under control with centralized network oversight and unified billing across locations.

ENTERPRISE NETWORK ARCHITECTURE (WAN/LAN)
When your network struggles, everything else feels it. BDTS helps implement dependable WAN and LAN architectures that reduce downtime, improve performance, and scale with your operation.

WIRELESS NETWORK ASSESSMENT & OPTIMIZATION
Do you suffer from unreliable Wi-Fi, dead zones, or inconsistent performance? Using Ekahau Wi-Fi heat mapping and validation tools, we identify root causes and optimize wireless networks to deliver reliable, facility-wide coverage.

INDUSTRIAL AUTOMATION INFRASTRUCTURE SERVICES
Automation is often deployed before the supporting infrastructure is fully in place. We help retrofit and install the low-voltage and network backbone needed to support robotic and automated systems in manufacturing, logistics, and warehousing environments.

ISP, LTE & CELLULAR NETWORK SOLUTIONS
If your operation depends on connectivity, a single outage can have a major impact. We help put primary and backup connectivity in place to ensure reliable performance.

CUSTOM HARDWARE DESIGN & FABRICATION
Some applications require more than a catalog solution. We help engineer and fabricate custom hardware that aligns with your operational requirements and integrates cleanly into your environment.

BDTS

COMPETITIVE ADVANTAGES

WOMEN-OWNED
For organizations with supplier diversity initiatives or contract requirements, BDTS offers a qualified women-owned partner without compromising execution or service quality.

COMPLETE PROJECT EXECUTION
Technology projects often stall when responsibilities are split across multiple vendors. BDTS helps eliminate gaps and finger-pointing by supporting projects from planning through completion, including the contracting of supporting trades and infrastructure work.

QUALIFIED, MISSION-DRIVEN TEAM
Projects succeed when teams show up prepared, communicate clearly, and follow through. BDTS is built around experienced professionals with mission-critical backgrounds who bring discipline, reliability, and accountability to every engagement.

FORWARD-LOOKING INFRASTRUCTURE PLANNING
Infrastructure that isn't planned for growth can quickly become a limitation. BDTS helps put the right foundation in place so technology systems can scale as operational needs change.

PROVEN DELIVERY ACROSS COMPLEX ENVIRONMENTS
Large-scale and complex environments require experience, coordination, and precision. BDTS has a proven track record supporting high-impact technology deployments where reliability and execution matter most.
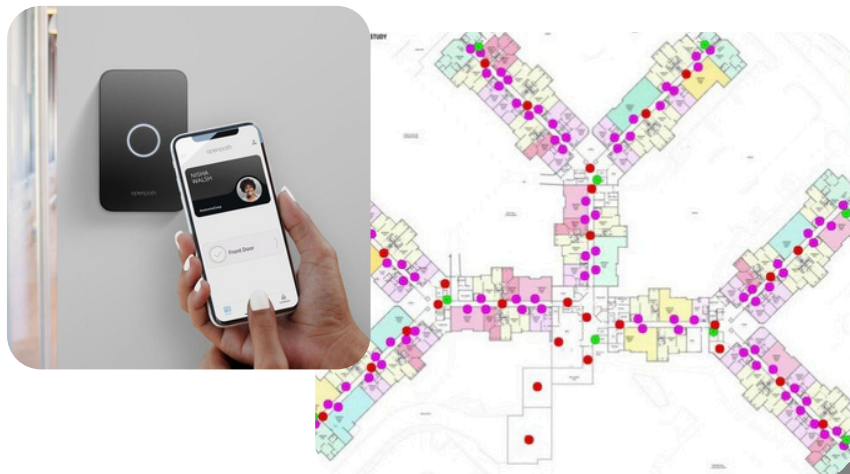

CLIENT-FOCUSED PROBLEM SOLVING
When solutions aren't aligned with how your operation actually runs, performance suffers. BDTS focuses on understanding your requirements first, then applying practical solutions that fit your environment.

DEEP TECHNICAL & FIELD EXPERTISE
Nothing is worse than a technology project failing due to inexperience in the field. BDTS combines deep technical knowledge with hands-on experience to ensure infrastructure and hardware are installed correctly and perform as intended.

Enterprise Experience
Our team has proven experience supporting technology infrastructure for multi-billion-dollar organizations across the US.
